

What and how can you learn from great bibliographies?

prof. dr hab. Adam Pawłowski
University of Wrocław

dr inż. Tomasz Walkowiak
Wrocław University of Science and Technology
28th November 2023

Presentation plan

- **SHOW FROM WEB [<http://phc.uni.wroc.pl/wbw>]**

- **DATA**

Bibliography as a source of data

Structured data and MARC format

National Library databases

- **METHOD**

Automatic language processing (NLP)

Digital humanities and data science

- **RESULTS**

Bibliomap as a historical cross-section of the development of Poland

The world in Polish publications

Gender vs topics and genres of publications

Analysis of publishing dynamics in Polish cities

Data - types of bibliography

Colloquially, a bibliography is a short appendix to a document.
For a computer scientist, it is a structured corpus of data.

The basic division of bibliography types includes:

- general (national);
- special (limited range, scope, type of publication)
- field (subject)
- mixed

Joking in the Orwellian style, one should say:

all bibliographies are equally interesting, but national bibliographies are more interesting.

Bibliography as a source of data

Traditionally, the recipient of bibliographic information is the user who seeks publications on a given topic.

De facto, therefore, it receives not information, but metainformation.

BUT...

A sufficiently comprehensive, structured corpus of data is also a source of knowledge.

Thus, in the world of digital humanities, large bibliographies are also a primary source of information and knowledge about the world.

Formats

This type of database is dominated by the MARC, or Machine-Readable Cataloging, family of formats, ISO 2709:2008 standard.

The first version was created at the Library of Congress as early as in **the 1960s**, and has been the standard in the US since 1971.
The most widely used version today is MARC 21.

Most of mankind's written heritage is thus described by a standard that is now more than 60 years old.

Digression: how many years longer?

The MARC standard format is dying!

PAUL MOSS

Replacing MARC: Where to Start

The MARC format for transmittal of bibliographic records has been an unparalleled success for interlibrary communication. This success, however, has also brought about a world that deals exclusively in MARC and is inherently bound by its limitations. Several efforts over the years have been made to break free of these perceived limitations, but these efforts often miss the crucial mis-step of MARC-like thinking: that a library interchange format should be the only way to ingest, expose, or build systems around bibliographic data. In order to begin a transition away from MARC, each function MARC serves should be examined independently and may be replaced by a different technology.

"A heart transplant is underway. In a similar manner, MARC has been the watchword in protecting library data for over 50

years. It is time to accept that it should die and gave very logical reasons why. Librarians and librarians alike have a built-in desire to protect their data and the development of

alternatives makes the situation more useful both

for the library and the

world".

A study had been conducted since

In June 2016 the Acquisitions & Bibliographic Services department at the University of Illinois began a pilot project in October 2015 to test the efficacy of BIBFRAME.

MARC 21 format – example of instructions

041 Język dokumentu (P)

Wskaźniki

Pierwszy - wskaźnik przekładu

- 0 dokument nie jest przekładem i nie zawiera przekładek
- 1 dokument jest przekładem lub zawiera przekład

Drugi - źródło kodu

0 MARC Code List for Languages.

Kody podpól

Sa Język tekstu (P)

Sb Język streszczeń (P)

Sh Język tekstu oryginalnego i/lub pośredniego (P)

Zawartość pola

Pole 041 zawiera informację dotyczącą języków dokumentu, jeżeli nie jest możliwe umieszczenie pełnej informacji o językach dokumentu w polu 008/35-37. Ma zastosowanie w opisie dokumentów wielojęzycznych (także jeśli jednym z języków jest język migowy) lub zawierających tłumaczenie oraz jeśli język streszczeń, abstraktów lub materiałów towarzyszących jest inny niż język tekstu głównego.

Informację o języku podaje się w postaci trzyliterowego kodu według MARC Code List for Languages.

Pole 041 używane jest w połączeniu z pozycjami 35–37 pola 008. Kod podany w tych pozycjach powinien być identyczny z kodem wpisanym w pierwszym podpolu \$a pola 041.

Informacje o języku mogą być podawane także w formie słownej w polu 546.

Znaki umowne

Na końcu pola 041 nie stawia się kropki.

Wskaźniki

Pierwszy wskaźnik - wskaźnik przekładu

0 - dokument nie jest przekładem i nie zawiera przekładek

008/35-37 eng

041 0e \$a eng \$a fre

dokument nie jest przekładem, tekst jest w językach angielskim i francuskim

1 - dokument jest przekładem lub zawiera przekład

008/35-37 eng

041 1e \$a eng \$h rus

dokument jest przekładem z języka rosyjskiego na angielski

Drugi wskaźnik - źródło kodu

0 - MARC Code List for Languages

Wartość 0 (spacja) oznacza, że kody podawane w polu 041 są przejmowane z MARC Code List for Languages.

Podpola

\$a - Język tekstu

Podaje się trzyliterowe kody języków tekstu dokumentu podane w porządku ich dominacji w tekście lub w porządku alfabetycznym, jeżeli żaden z języków nie dominuje. Dla każdego kodu języka tekstu powtarza się podpole \$a. Pierwszy kod powinien być zgodny z kodem wymienionym w polu stałej długości (008/35-37). Jeżeli tekst jest w bardzo wielu językach (np. więcej niż sześciu), a w pozycjach 35-37 pola 008 podano kod „mul”, w pierwszym podpolu \$a podaje się kod języka tytułu dokumentu lub pierwszego tytułu (jeżeli jest on w więcej niż jednym języku), w drugim podpolu \$a podaje się kod „mul” (wiele języków).

Jeżeli dokument zawiera tekst oryginalny i towarzyszący mu przekład, w powtórzonym podpolu \$a podaje się zarówno kod języka przekładu, jak i oryginału. Język oryginału wymienia się także w podpolu \$h.

008/35-37 pol

041 0e \$a pol \$a eng \$a rus

546 @@ \$a Tekst pol., ang., ros.

tekst w języku angielskim, polskim, rosyjskim z przewagą języka polskiego

\$b - Język streszczeń

Podaje się w porządku alfabetycznym kody języków streszczeń różnych od języka tekstu głównego. Dla każdego kodu języka streszczeń powtarza się podpole \$b.

041 0e \$a eng \$a mul \$b eng \$b fre

tekst w więcej niż sześciu językach z przewagą języka angielskiego, streszczenia w języku angielskim i francuskim

MARC 21 format

The description of all fields of the MARC 21 format is contained in 175 pages of the manual.

Or in many thick volumes.

Structured data

**Structured data contain a repetitive arrangement of fields.
They are easy to process, but shallow in information.**

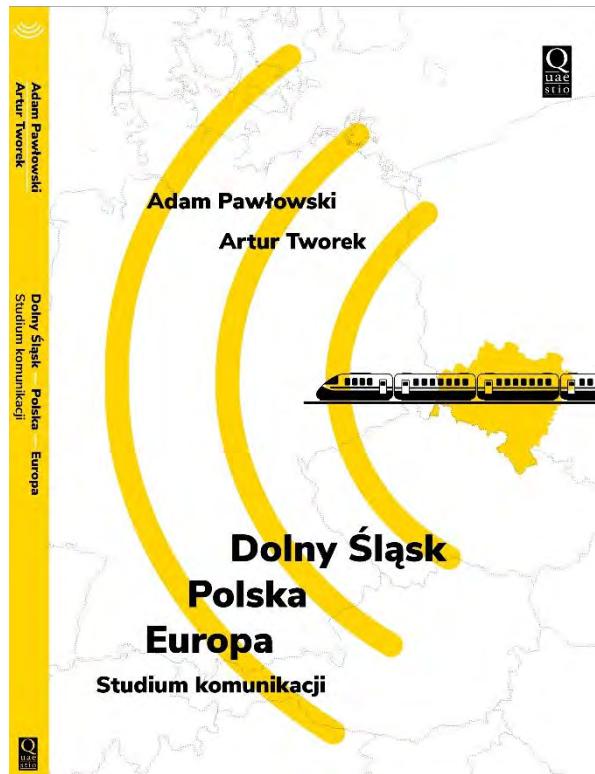

010 – Library of Congress control number
020 – International standard book number
037 – Source of acquisition
040 – Original source of cataloging \$c Inputting library
041 – Language code
050 – Library of Congress call number
082 – Dewey decimal call number
090 – Locally assigned Library of Congress call number
092 – Locally assigned Dewey call number
049 – Local holdings
1xx – Author main entry (personal, corporate or conference)
245 10 Title proper : \$b Remainder of title / \$c Statement of responsibility
246 – Varying form of title

250 – Edition statement
260 – Place of publication : \$b Publisher, \$c Date
300 – Extent of item : \$b Other physical details (illustrations, etc.) \$c Dimensions
490 – Series statement as transcribed from item
500 – General notes
504 – Bibliography, etc. note
505 – Contents note
520 – Summary, abstract, annotation, scope, etc. note
590 – Local notes
6xx – Subject access fields (added entries)
700-740 Added entry-Uncontrolled related/analytical title
800-740 Series added entry as established

Marc 21 record as it is read by machines

Title	Dolny Śląsk - Polska - Europa: studium komunikacji / Adam Pawłowski, Artur Tworek.
Creator	Pawłowski, Adam (historia) Autor > Tworek, Artur (1965-) Autor >
Format	Oficyna Wydawnicza Atut Wydawca > 334 strony : faksymilia, fotografie, ilustracje, mapy, wykresy ; 29 cm + mapa.
Publisher	Wrocław : Oficyna Wydawnicza Atut - Wrocławskie Wydawnictwo Oświatowe
Creation Date	2021
Note	Bibliografia na stronach 235-246. Indeksy. Współfinansowanie: Uniwersytet Wrocławski
Form and type	Książki Publikacje naukowe
Subject	1801-1900 > 1901-2000 > Komunikacja społeczna > Regionalizm > Transport > Dolny Śląsk > Województwo dolnośląskie (1999-) > Opracowanie Historia Media i komunikacja społeczna Sociologia i społeczeństwo Transport i logistyka
Genre	
Discipline and Approach	
Identifier	ISBN : 9788379777082
UKD	913(438) 316.77(438) 656
Language	Polish

Legenda:

- toponim (rzutowanie na mapę)
- antroponim (rzutowanie na bazę bibliograficzną)
- słowo kluczowe (rzutowanie na ontologię)
- gatunek piśmienniczy
- numer klasifikacji UKD (rzutowanie na słowniki i bazy leksykalne)

Data: National Library databases

Poland does not currently have a complete National Bibliography.

It does, however, have the catalogs of the National Library, which are almost complete after 1918.

BN catalog = magazine content

National Bibliography = anything that meets the criteria (but doesn't have to be physically in stock)

BN Catalog < National Bibliography

Data: National Library databases

Methods

3 methodological pillars

- Programming for databases, data linking and visualization (especially on maps).
- Natural Language Processing (NLP)
- Digital humanities (interpretation, topic selection, holistic and integrative approach)

What is NLP?

A collection of algorithms and resources that allow automatic analysis of language (text).

- recognition of basic forms (*domowi* → *dom*)
- recognition of syntactic structures
- quantitative analyses
- semantic analyses

Application: analysis of text fields of a record (e.g., titles).

Digital Humanities

A system of interrelated resources, functionalities and cognitive practices, created by transferring to the digital realm and creatively expanding the heritage of the humanities growing out of print culture.

Results part 1

- projection of records onto a map
- historical cross-section

Where to get the coordinates from?

GeoNames

The GeoNames geographical database covers all countries and contains over eleven million placenames that are available for download free of charge.

Where to find us?

<http://phc.uni.wroc.pl/wbw/>

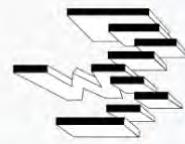

Large bibliographies have been created for decades wherever nations or communities of communication have produced a significant body of writing. They are not just simple publication registers serving the immediate information needs of society. The scale effect and the (meta)data contained in the records make large bibliographies synthetically reflect trends in culture, politics and civilization. The development of digital technologies has made it possible to extract and visualize this information, and the Internet has become an excellent platform for its dissemination.

Wrocław Bibliodata Website presents, in the form of an interactive application, the effects of projecting toponyms (local names) contained in bibliographic data onto maps, as well as visualizations of other information extracted from large bibliographies using NLP and text mining methods. Taking into account the requirements of big data methods, as well as commonly used historical periodizations, the so-called late modern and contemporary times, the conventional beginning of which is the year 1800.

The scientific base of **the Wrocław Bibliodata Website** is the Institute of Scientific Information and Library Science of the University of Wrocław, while technological support is provided by the CLARIN-PL consortium team and the Wrocław University of Science and Technology. The originators and contractors of the project are prof. Ph.D. Adam Pawłowski (UWr) and Dr. Eng. Tomasz Walkowiak (PWr).

Directions of interest and influence

Why are the lines kinking?

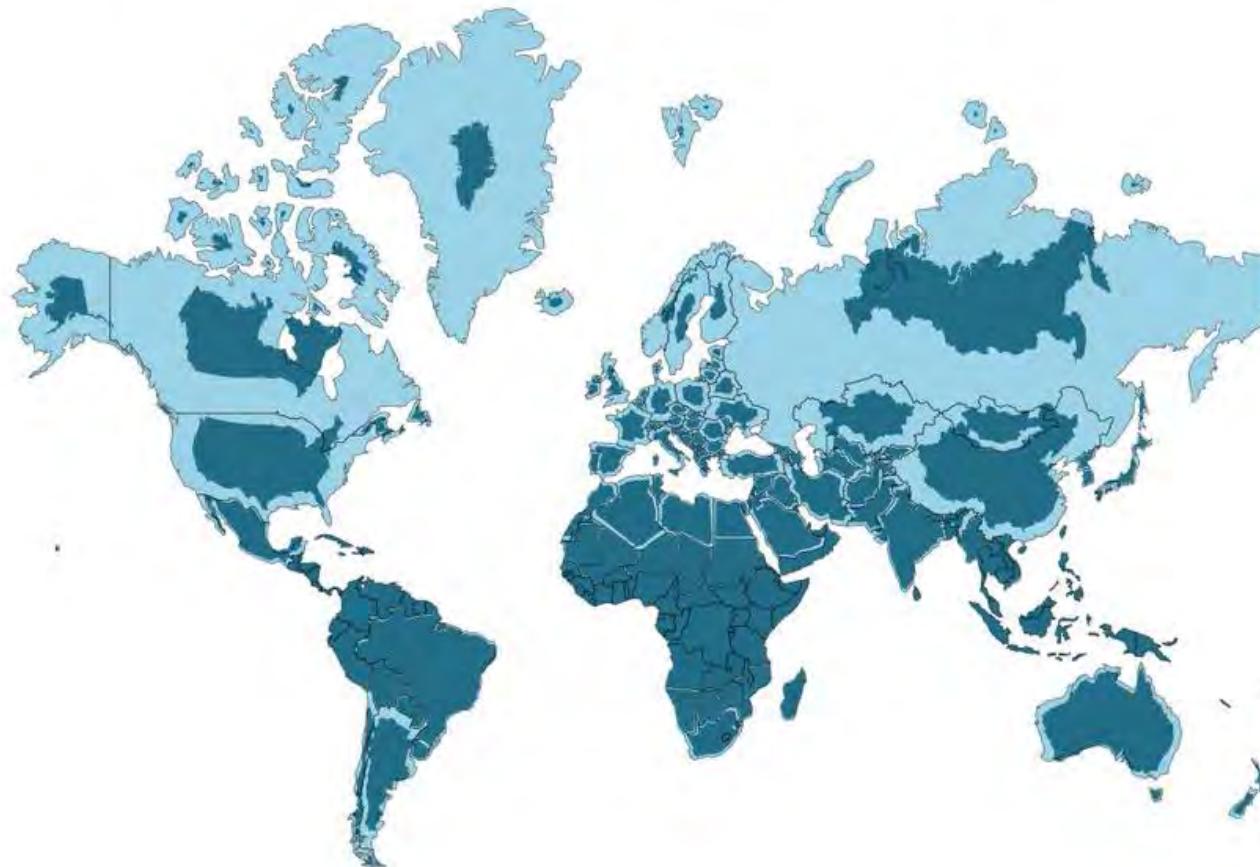

Gerard Mercator (1512 - 1594)

A 16th century geographer, cosmographer and cartographer who came from Flanders. His greatest fame came with the creation of a world map in 1569, based on a new projection that depicted fixed-direction sailing routes (known as rhumb lines) as straight lines. This innovation is still used in nautical charts today.

Mercator was a pioneer of cartography. Along with Gemma Frisius and Abraham Ortelius, he is widely regarded as one of the founders of the Dutch school of cartography and geography. He is also widely regarded as the most significant figure of this school. In his time he was a well-known maker of globes and scientific instruments.

Is the earth definitely round?

World Mercator projection with true country size and shape added

Results part 2

Gender of authors vs. number and topics of publications (Poland vs. Germany)

General considerations

Writing and publishing a book is, in statistical terms, an indicator that aggregates other specific indicators.

- education → average education, level of education
- wealth level → average income
- prestige
- social acceptance

The assumption that the number of books published by a given social group is an approximation of the measure of emancipation is therefore correct.

In addition: certain economic measures are impossible to calculate in Central Europe during the time covered by the study (1800 onwards).

Gender of PL/DE authors: purpose and hypotheses

Specific Objectives:

- show the proportions of women and men among authors of books published between 1801 and 2021 in two European countries (communities of communication): Poland and Germany
- extract themes (topics) characteristic of authors from book titles
- identify the content that distinguishes the writing of both sexes

Approach and methodology:

We applied NLP techniques, mathematical statistics and programming databases to large bibliographic databases.

This made it possible to conduct the study in the perspective of the so-called "*longue duree*" (in the sense of the research methodology of the Annales school).

Gender of authors PL/DE: data

Data: catalog of the National Library and Deutsche Nationalbibliothek

Format: MARC 21

Additionally: Poland the 19th Cent. - Estreicher Bibliography (to the letter k)

Filtering data from both databases:

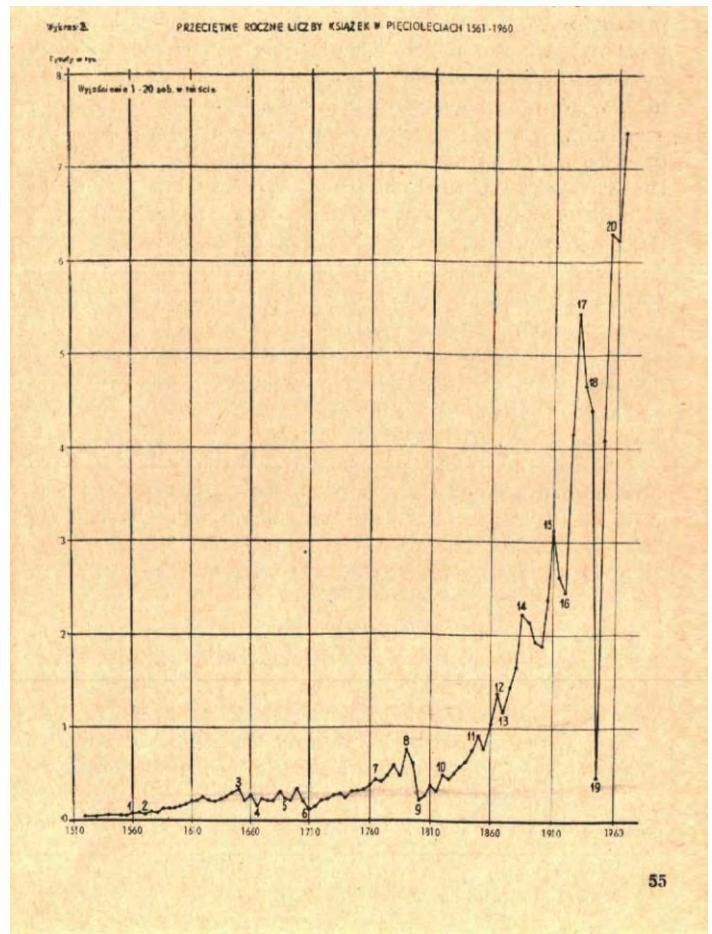

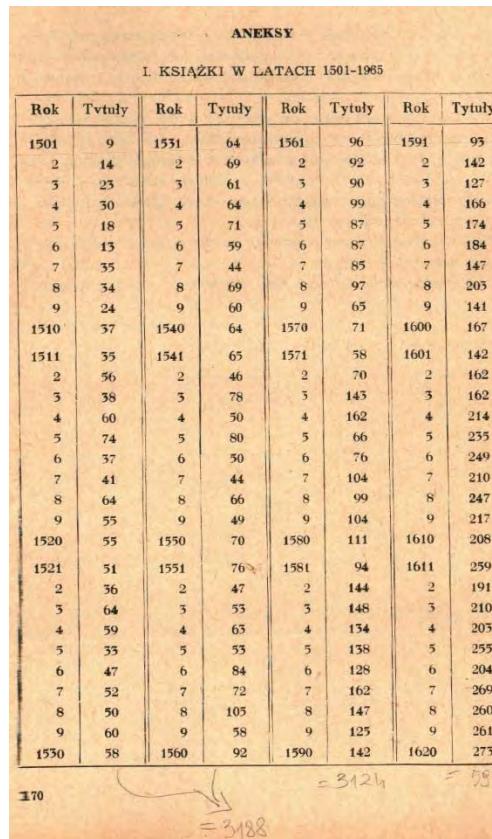

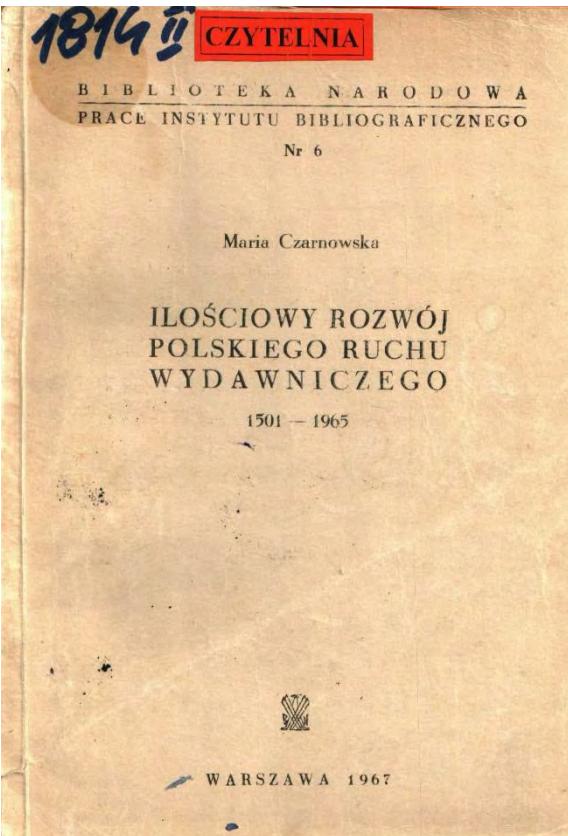

- PL and DE language included
- non-empty fields 'title', 'author', 'release date' are included
- non-text records (maps, sheet music, recordings, etc.) and periodicals were omitted

Data cleaning:

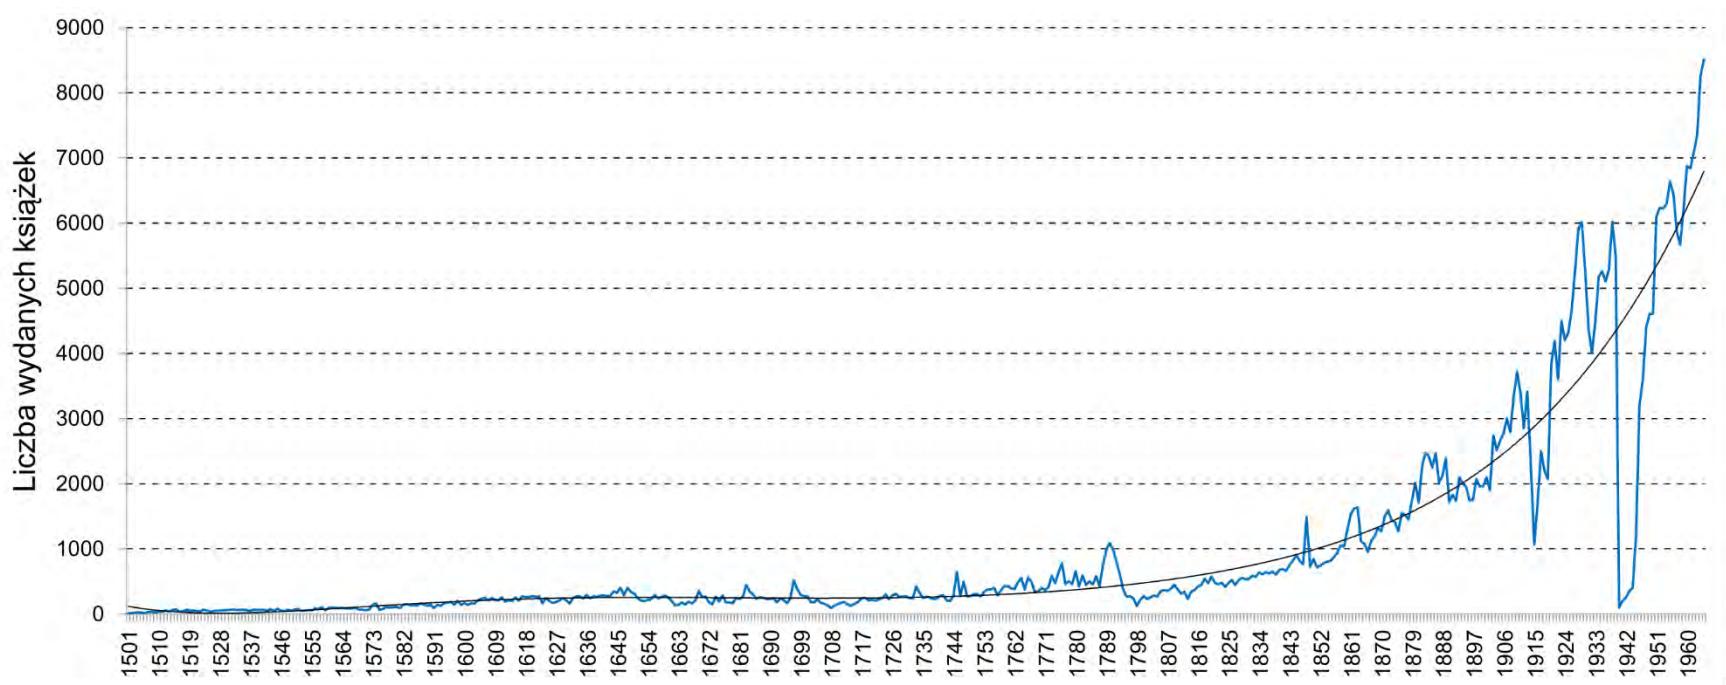

- automatic separation of first name from last name
- Unification of the coding of umlauts (can be two-characters)
- Removal of duplicates from the Estreicher Bibliography

Final volume: PL = ca 1.4 million records, DE = ca 7.5 million records

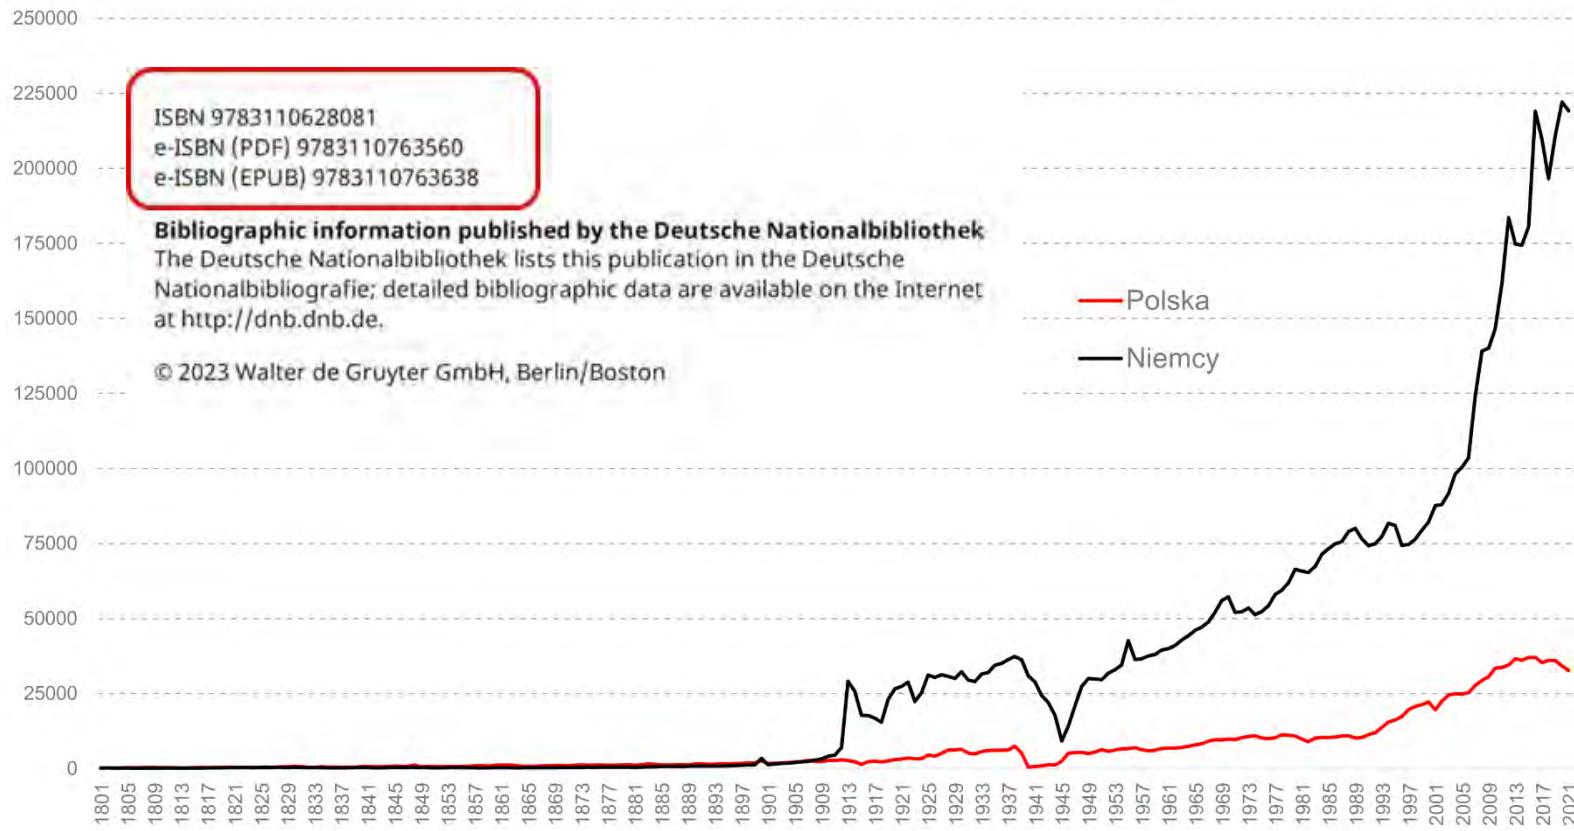

Glory for the pioneers: Maria Czarnowska

Trying to explain the differences: rooting

Summaries and conclusions

Summary

- The official emergence of bibliographic data the research repertoire of NLP, AI and digital humanities
- Proof of the great potential of big bibliographic data
- Tangible effect of beneficial synergy of cooperation between computer science and humanities

but also

- A token of appreciation for the multitudes of faceless, poorly paid librarians who have painstakingly done their jobs for decades

Barriers and problems

- Lack of understanding and appreciation for research of great bibliographies
- Lack of rooting in traditional disciplines
- The slow formation of the identity of digital humanities and humanistic strands of *data* science
